

## DL-ZN DATASHEET

DENDROMETER FOR LORAWAN®

## FEATURES

LoRaWAN®-enabled O- or T-shaped point dendrometer.

Measures swelling and shrinkage of stems, branches or roots with a sub-micrometer resolution.

Carbon fiber (CFK) frame combined with stainless steel elements for superior long-term and temperature stability.

Measurement range: 20000 µm = 20 mm.

Compatible with LoRaWAN® networks of any provider.

Place and measure: no setup required.

Configurable via command line interface and downlink command interface.

Unattended real-time monitoring for several years without replacing batteries.

Robust polycarbonate enclosure: weatherproof, impact-, UV-resistant (IP67).

Standard alkaline (C-type) batteries.

CE compliant, Radio Equipment Directive (RED) 2014/53/EU.

## APPLICATIONS

Outdoor remote monitoring.

Irrigation control.

Smart agriculture.

Forestry.

Plantation.

Ecophysiology.

## DESCRIPTION

Sensor data are transmitted in real-time using LoRaWAN® radio technology. LoRaWAN® enables encrypted radio transmissions over long distances while consuming very little power. The user can obtain sensor data through Decentlab's data storage and visualization system, or through the user's own infrastructure. Visit [www.decentlab.com](http://www.decentlab.com) for more information about Decentlab's data cloud service.

## DEVICE VARIANTS

Name	Variant
DL-ZN1-001	T-shaped dendrometer
DL-ZN1-002	O-shaped dendrometer
DL-ZN2-001	T-shaped dual dendrometer (two displacement transducers)
DL-ZN2-002	O-shaped dual dendrometer (two displacement transducers)

T-shaped dendrometer

O-shaped dendrometer

## DEVICE SPECIFICATIONS

### DEVICE LOGGING FUNCTION

Sampling interval	10 min (configurable through the user interfaces)
Data upload interval	10 min (configurable through the user interfaces)
Reported sensor data (average of samples)	Dendrometer A position Dendrometer B position (dual dendrometer variant only) Battery voltage

### DENDROMETER POSITION

Operating principle	Displacement transducer: linear potentiometer
Measurement range	0 ... 20000 $\mu\text{m}$
Resolution	0.003 $\mu\text{m}$ (23 bit)

### RADIO / WIRELESS

Wireless technology	LoRaWAN <sup>®</sup>
Wireless security	AES-128 data encryption
LoRaWAN <sup>®</sup> device type	Class A end-device
Supported LoRaWAN <sup>®</sup> features	OTAA, ABP, ADR, adaptive channel setup
Wireless range	> 10 km (line of sight <sup>1</sup> ), approx. 2 km (suburban)
RF transmit power	14 dBm (25 mW)
Effective radiated power	11.9 dBm maximum <sup>2</sup>
Receiver sensitivity	-146 dBm <sup>3</sup>
Frequency bands	868 MHz (EU version), 915 MHz (US, AS, AU versions) <sup>4</sup>
Antenna	Integrated omnidirectional antenna featuring a near-perfect radiation pattern <sup>2</sup>

### POWER SUPPLY

Internal battery type	2 × alkaline C batteries (LR14)
Power consumption (average)	≤ 0.5 mW (10 min interval)
Battery lifetime estimation <sup>5</sup>	9.3 years (10 min interval, SF7) 4.4 years (10 min interval, SF12) 15.8 years (60 min interval, SF7) 12.1 years (60 min interval, SF12)

1 Decentlab reports successful transmissions over 56 km distance and more

2 See Appendix A: Antenna performance

3 Specified by radio chip vendor

4 Contact us for region specific options

5 Including alkaline battery self-discharge of 3.6 % per year (conservative estimation); battery capacity: 20000 mWh.

## DECENTLAB

## OPERATING CONDITIONS

---

Temperature	-20 ... 50 °C
Humidity	0 ... 100 % RH

---

## MECHANICAL SPECIFICATIONS

---

Dendrometer dimensions	190 × 92 × 8 mm (T-shaped dendrometer plate)
Dendrometer weight	200 g approx.
Cable length	1 m
Sensor device dimensions	135 × 81 × 70 mm (not including sensor / cable)
Sensor device weight	400 g including batteries (270 g without batteries)
Sensor device material, IP rating	Polycarbonate; weatherproof, impact-, UV-resistant (IP66/IP67). Pressure equalizer plug with PTFE membrane (IP68).

---

## OPERATING INSTRUCTIONS

The product usually requires no user interaction. If you open the enclosure, e.g. in order to replace the batteries, unscrew the four plastic screws and carefully open the lid.

**CAUTION:** Make sure the sensor unit does not drop out of the enclosure while opening! Do not touch the electronic components and sensors!

**NOTE:** When closing the lid, make sure the lid is fitted the right way, so that the enclosure is properly sealed: A little nose in the enclosure fits a notch in the lid and vice versa.

## REPLACING BATTERIES

Insert 2 high-quality alkaline C batteries (LR14) into the battery holder on the back side of the sensor unit. The device operates until the battery voltage drops to 2.0 V. Always replace both battery cells with two identical fresh batteries.

## USER BUTTON AND LEDS

Illustration 1: Sensor unit showing the user button and LEDs. The battery holder is on the back side of the sensor unit.

## OPERATING MODES

The device has four operating modes:

- Reset: System (re-)start; both LEDs faded in and out.
- Active mode (ON): Periodic measurements and data transmissions; green LED flashes for each measurement.
- Sleep mode (OFF): No measurements and data transmissions (power save mode, for shelf storage). LEDs are off.
- Test mode: Measurements and data transmissions at fastest possible rates; blue LED is on.  
NOTE: Use only momentarily, e.g. for testing the sensor or the wireless connection. The device will switch automatically to active mode after 20 minutes.

### SWITCHING BETWEEN OPERATING MODES

The user button allows to switch between the operating modes as shown in Illustration 2 and Illustration 3. To perform a device reset, switch to sleep mode first (if necessary) by pushing and holding the button for 3 seconds until the LEDs flash three times; wait 3 seconds; then push and hold the button for 3 seconds until the LEDs faded in and out. To switch between active and test mode, push the button for 1 second (blue LED on / off). If the blue LED is off, the device is in active or sleep mode. If the blue LED is on, the device is in test mode.

HINT: To check whether the device is active or in sleep mode (on or off), push the button twice; if the blue LED goes on and off, the device is in active mode; otherwise, the device is in sleep mode.

Illustration 2: Switching between active and sleep mode (switch off / on, reset).

Illustration 3: Switching between active and test mode.

## MEASUREMENT CYCLE (ACTIVE MODE)

During the active mode, the device periodically reads the sensors with sampling period  $T_s = 10$  minutes (default, configurable). When the send period  $T_{TX} = n \cdot T_s$  (default:  $n = 1$ , configurable) has expired, the device computes the average of the collected sensor values (at most 20 values). After a random delay of 0 ... 8 seconds, the device transmits the aggregated sensor data. If the device has not yet joined the LoRaWAN® network, it will try to join until it succeeds (maximum 3 attempts per sampling period). Afterwards, it will transmit the data (TX data). Following the data transmission, two receive slots are opened (RX1 and RX2). During these time slots, the device is ready to receive data from the network (downlink messages) as defined in the LoRaWAN® specification.

As shown in the diagrams, the device is idle most of the time. During the idle time, the current consumption is extremely low.

Illustration 4: Device activity during the active mode.

Illustration 5: Sampling period vs. send period. Default:  $T_s = 10$  min,  $T_{TX} = 1 \cdot 10$  min = 10 min.

## LED SIGNALING (ACTIVE MODE)

- Read sensors: green LED flashes once.
- Data sent successfully: green LED flashes 2 times.
- Data could not be sent: green LED flashes 4 times.

## DEVICE CONFIGURATION

The user can configure a rich set of device parameters, such as sampling interval, LoRaWAN® data rate, ADR settings and many more. If desired, the parameter settings can be stored permanently in the internal non-volatile memory. The user can configure the device via two interfaces:

- Command line interface: via a serial cable (UART – USB) connected to a computer.
- Downlink command interface: over the air using LoRaWAN® downlink messages.

For a full description of the command line interface and the downlink command interface, please find the specific documents on [www.decentlab.com/support](http://www.decentlab.com/support).

## MOUNTING INSTRUCTIONS

Prefer a mounting location which is protected against rain and direct sun radiation.

For best radio performance, install the device upright with the cable towards ground; ideally, in such a way that the device lid faces roughly in the direction of the next gateway. Also, the higher above ground, the better. Avoid metallic objects close to the device.

The housing includes 4 threaded bushes (M4) in a 90 × 60 mm rectangle (see Illustration 6). This enables easy installation using standard M4 bolts.

Illustration 6: Housing dimensions (in mm). Note: Drawing not including cable gland and sensor.

## ORDERING INFORMATION

REFERENCE	VERSION	REGION (LORAWAN®)
DL-ZN1-001-EU868	T-shaped dendrometer	Europe
DL-ZN1-001-US915	T-shaped dendrometer	North America
DL-ZN1-001-AS923	T-shaped dendrometer	Asia
DL-ZN1-001-AU915	T-shaped dendrometer	Australia, South America
DL-ZN1-002-EU868	O-shaped dendrometer	Europe
DL-ZN1-002-US915	O-shaped dendrometer	North America
DL-ZN1-002-AS923	O-shaped dendrometer	Asia
DL-ZN1-002-AU915	O-shaped dendrometer	Australia, South America
DL-ZN2-001-EU868	T-shaped dual dendrometer	Europe

## SENSOR DATA MESSAGE FORMAT

Message:

Header	Sensor 0 data (optional)	Sensor 1 data (opt.)	...	Sensor 15 data (opt.)
--------	--------------------------	----------------------	-----	-----------------------

- Message length is variable, depending on which sensor data are included. Minimum length is 5 bytes (header only). Maximum length is 5 bytes + all sensor data (see below).
- Integers are big endian: MSB first byte, LSB last byte.

Header:

Version	Device ID	Flags
---------	-----------	-------

- Version: 1 byte; version = 2 for current protocol version.
- Device ID: 2 bytes; 0...65535.
- Flags: 16 bits: flag 15 | flag 14 | ... | flag 0 (LSB).
- The flags indicate, if data of the respective sensors are included in the message or not:  
Flag n == 1: sensor n data included; flag n == 0: not included.

## DECODER SOFTWARE

For message decoder software, please go to <https://www.decentlab.com/support>, where you find code examples in JavaScript and other programming languages.

## DETAILS – SINGLE DENDROMETER DL-ZN1

FIELD	PARAMETER NAME	TYPE	CONVERSION	UNIT
Header	Version	uint8		
Header	Device ID	uint16		
Header	Flags	uint16		
Sensor 0	Dendrometer A LSB ( $A_{LSB}$ )	uint16	x	
Sensor 0	Dendrometer A MSB ( $A_{MSB}$ )	uint16	x	
Sensor 1	Battery voltage	uint16	x / 1000	V

The **dendrometer position**  $p_A$  is calculated as follows:

$$p_A = ((A_{LSB} + A_{MSB} \cdot 65536) / 8388608 - 1) \cdot 20000 \text{ } [\mu\text{m}].$$

## DETAILS – DUAL DENDROMETER DL-ZN2

FIELD	PARAMETER NAME	TYPE	CONVERSION	UNIT
Header	Version	uint8		
Header	Device ID	uint16		
Header	Flags	uint16		
Sensor 0	Dendrometer A LSB ( $A_{LSB}$ )	uint16	x	
Sensor 0	Dendrometer A MSB ( $A_{MSB}$ )	uint16	x	
Sensor 0	Dendrometer B LSB ( $B_{LSB}$ )	uint16	x	
Sensor 0	Dendrometer B MSB ( $B_{MSB}$ )	uint16	x	
Sensor 1	Battery voltage	uint16	x / 1000	V

The **dendrometer positions**  $p_A$  and  $p_B$  are calculated as follows:

$$p_A = ((A_{LSB} + A_{MSB} \cdot 65536) / 8388608 - 1) \cdot 20000 \text{ } [\mu\text{m}]$$

$$p_B = ((A_{LSB} + A_{MSB} \cdot 65536) / 8388608 - (B_{LSB} + B_{MSB} \cdot 65536) / 8388608) \cdot 20000 \text{ } [\mu\text{m}].$$
